

## Insider Threat Mitigation for VIP Events

This policy case study focuses on mitigating insider threats at high-profile events. It covers key controls and best practices for protecting VIP events against malicious insiders or careless staff members.

### Security Awareness Training

Conduct regular training sessions for all staff, including temporary event workers. Topics should include recognizing social engineering, safeguarding access credentials, and reporting suspicious behavior.

### Least Privilege Access

Grant each staff member only the access they need to perform their duties. Implement role-based access controls and regularly review permissions.

### Reporting Procedures

Provide clear, anonymous reporting channels and a no-retaliation policy so employees feel safe raising concerns about suspicious activity.

### Continuous Monitoring and Anomaly Detection

Implement real-time logging of user activity and use anomaly detection algorithms to flag unusual patterns, such as off-hours access to restricted areas or repeated failed login attempts.

### Disclaimer

This document is for educational purposes and illustrates how to design insider threat controls for demonstration environments. Always tailor policies and procedures to your organization's unique needs and legal requirements.
